

# House Safety

## GAS SHUT OFF

**DO NOT TURN YOUR GAS OFF UNLESS IT IS THE REAL DEAL. DOING SO MAY REQUIRE YOUR GAS COMPANY TO COME OUT AND TURN IT BACK ON.**

Turn gas off...  
1. If you smell or hear natural gas leaking  
2. If there is a fire close to your home  
3. If the authorities tell you to

**TOOLS:**

**WHERE:**

**HOW:** Turn the valve a quarter turn, until it is perpendicular to the pipe (the holes will line up). It is off when the valve is perpendicular to the pipe. If the valve is parallel to the pipe, the gas is on.

## WATER SHUT OFF

**TOOLS:**

**WHERE:**

**HOW:** Turn the valve clockwise until it won't turn anymore.

## ELECTRICITY SHUT OFF

**WHERE:**

**HOW:**

## GARAGE DOOR - MANUALLY TURN OFF/ON

**DO NOT DISCONNECT POWER WHILE THE DOOR IS UP. IF YOU HAPPEN TO HAVE A BROKEN SPRING, THE FULL WEIGHT OF THE DOOR COULD COME CRASHING DOWN, SMASHING ANYTHING IN ITS PATH, AS WELL AS RUINING YOUR GARAGE DOOR.**

**HOW TO TURN OFF:**

1. Pull on the red cord hanging down from the trolley (the piece that carries the garage door on the upper track).
2. Pull rope down and toward the motor (toward house).
3. The trolley disconnects from the attachment point, and the door will stay disconnected.

**HOW TO TURN ON:** Just click the button to open/close it once the power is back on, and it will reconnect on its own. **OR...**

1. Pull the red rope down and toward the door itself. This will free the lever to attach to the attachment point.
2. Then lift the garage door until it attaches.
